Dependency Injection

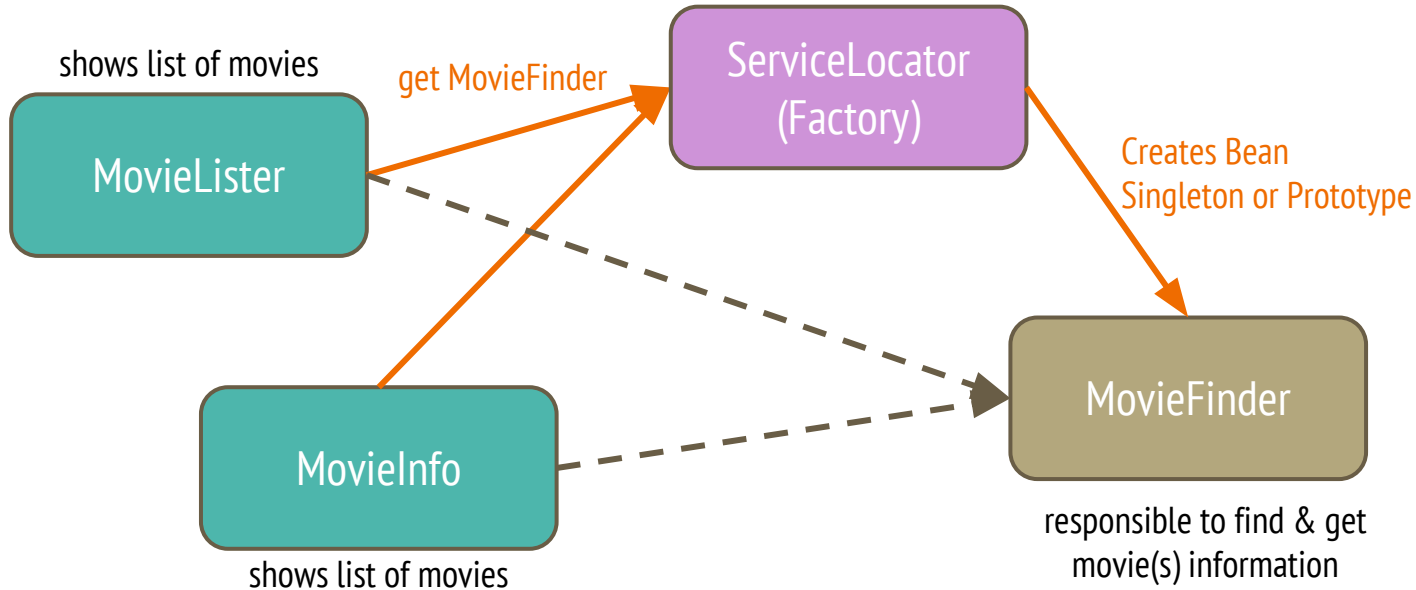

a.k.a Inversion of Control

<http://martinfowler.com/articles/injection.html>

What is dependency?

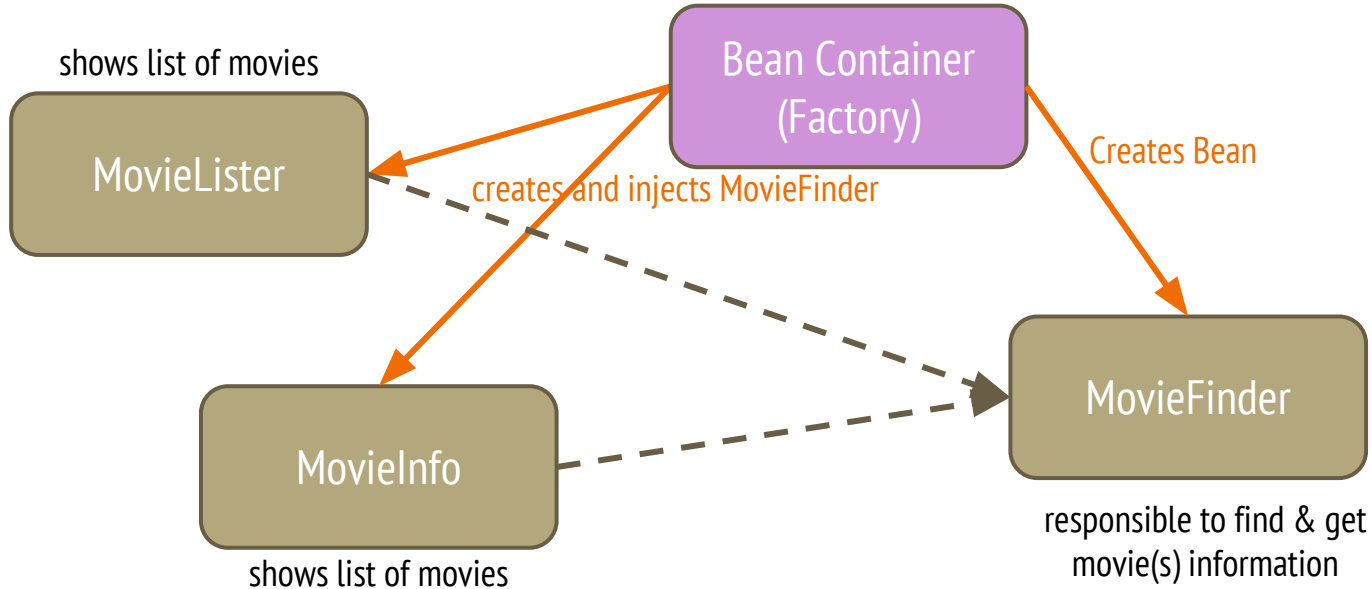

Service Locator / Factory - Design Pattern

Dependency Injection - Design Pattern

Since approach is inverted from previous, this design pattern was also called initially as **inversion of control (IoC)**.

Singleton - DI

```
<bean id="..." class="...">  
  <property name="accountDao"  
            ref="accountDao"/>  
</bean>
```

```
<bean id="..." class="...">  
  <property name="accountDao"  
            ref="accountDao"/>  
</bean>
```

```
<bean id="..." class="...">  
  <property name="accountDao"  
            ref="accountDao"/>  
</bean>
```

Only one instance is ever created...

... and this same shared instance is injected into each collaborating object

Prototype - DI

```
<bean id="..." class="...">  
  <property name="accountDao"  
    ref="accountDao"/>  
</bean>
```

A brand new bean instance is created...

1

```
<bean id="..." class="...">  
  <property name="accountDao"  
    ref="accountDao"/>  
</bean>
```

2

```
<bean id="accountDao" class="..."  
  scope="prototype" />
```

```
<bean id="..." class="...">  
  <property name="accountDao"  
    ref="accountDao"/>  
</bean>
```

3

... each and every time the prototype is referenced by collaborating beans

Bean Scope

- Singleton
- Prototype
- Request
- Session
- Global Session
- Application

<http://docs.spring.io/spring/docs/current/spring-framework-reference/htmlsingle/#beans-factory-scopes>

Spring Bean

- Spring as bean container
- Spring Lifecycle @PostConstruct & @PreDestroy
- Spring Bean Scope Singleton & Prototype, Request Scope, Session Scope

XML vs Annotations

- Provides Type Safety
- Bean configuration near to code
- Brings more readability to code

Basic Annotations

@Bean

@AutoWired, @Inject & @Resource

@Component & @Service

@Repository

@Configuration

<https://dzone.com/refcardz/spring-annotations>

@Bean

@Configuration

```
public class MovieConfiguration {
```

@Bean

@Primary

```
public MovieCatalog firstMovieCatalog() { ... }
```

@Bean

```
public MovieCatalog secondMovieCatalog() { ... }
```

```
}
```

```
public class MovieRecommender {  
    @Autowired // field based injection  
    private MovieCatalog movieCatalog;  
  
    @Autowired // all beans of type MovieCatalog  
    private MovieCatalog[] movieCatalogs;  
  
    private MovieCatalog movieCatalog;  
    @Autowired // constructor based injection  
    public MovieRecommender(MovieCatalog movieCatalog) {  
        this.movieCatalog = movieCatalog;  
    }  
}
```

@Service, @Repository & @Configuration, @ComponentScan

@Service

```
public class SimpleMovieLister {  
  
    private MovieFinder movieFinder;  
  
    @Autowired  
    public SimpleMovieLister(MovieFinder movieFinder) {  
        this.movieFinder = movieFinder;  
    }  
}
```

@Repository

```
public class JpaMovieFinder implements MovieFinder {  
    // ...  
}
```

@Configuration

@ComponentScan(basePackages = "org.example")

```
public class AppConfig {  
    ...  
}
```
